

DSPico Firmware Guide

Version 1.1

Ansem – Seeker of Darkness

Firmware Names and Descriptions

As of this guide, I have 3 active firmware's for the DSPico from LNH Team;

These firmware's are:

- Hybrid
- Wrfuxxed
- B.Y.O

Overview:

Since version 1.0 of this document I have tested and reduced to 3 different firmware files. I have been testing a modified build of the firmware that is a combination of the official github commits and Edo's fork manually merged in, meaning by default they should both be normal unless you boot into NTR mode. As a result I now only have to update 2 main firmware, Hybrid and Wrfuxxed with no sub versions of either.

The 3rd firmware I now have is called DSPico_B.Y.O.uf2, this 3rd option is legally distributable as it no longer includes and copyrighted roms or binaries. However I only recommend that it is used by advanced users.

DSPico Firmware's are either Hybrid or Wrfuxxed, lets break these down more. The Hybrid Firmware is what people can compile github without the need of the WRFU Test rom, however the other two files are still required.

Hybrid Firmware will only boot on DS/DSLite and Modified DSi/3DS system consoles. A build of the firmware with wrfuxxed enabled will work on all unmodified console, due to the exploit with the wrfu test rom.

Firmware Version	DS	DS Lite	DSi	3DS	Firmware Author/Fork	Comments
Hybrid	✓	✓	!	!	LNH Team + Forked/edo9300	Will only boot DSi and 3DS Family Consoles only if they are modded
WRFuxxed	✓	✓	✓	✓	LNH Team + Forked/edo9300	Shows Test/Demo Cart on Unmodified DSi/3DS Consoles
B.Y.O Edition	✓	✓	✓	✓	Pheeeeeenom	Please follow the installation instructions on my website if you wish to use this version.

Okay, so you read all that information and its still confusing, it's okay I understand, let me break it down more:

I have a DS or a DS Lite and I don't want to mod or use in it a DSi/3DS

- Use Hybrid

I have a DS or a DS Lite and I want to mod or use in it a DSi/3DS

- Use Hybrid or WRFUXXED **(Depending on if its modified or not.)**

I have an Unmodified DSi/3DS and I don't want to mod it

- Use WRFUXXED

I have a Modified DSi/3DS and I don't want mod others

- Use either

I have a Modified DSi/3DS and I want to mod other DSi/3DS Consoles

- Use WRFUXXED
